Series 200 Decorative wall, planter, and curb deterrents

Our low profile skateboard deterrents and stops can be used on walls, planters, benches, picnic tables and curbs. The series 200 is our most popular deterrent design because it is completely rounded and bull nosed therefore limiting the inconvenience to the general public.

They are mounted by drilling two holes for the two anchors and screws. Every one of StopAGrind's deterrents are custom machined from a solid block of aluminum. This allows us to match any contour you may need at no additional cost to you. For your convenience we do offer packages with and without the fasteners.

**Installation as simple as 123**

- Drill two holes 1/2” diameter into the base material to a depth equal to, or slightly deeper than, the length of the expansion shield.
- Place the single expansion anchor, nut end first, into the hole. The top end of the anchor should be flush or slightly below the base material surface.
- Place the object to be fastened over the anchor in the base material and bolt into place. The bolt should engage 2/3 of the threads of the anchor.
