Series 500 Park Bench Deterrents

Thru Hole Option

Blind Hole
 1/4-20 Option

Our bench deterrents resemble our popular series 200 skateboard deterrent, but are milled to fit your bench profile. The deterrent is completely rounded and bull nosed therefore limiting the inconvenience to the general public.

The skateboard deterrents can be mounted from the top or mounted from the bottom with a blind 1/4-20 tapped hole. This allows for a cleaner finished look. Every one of StopAGrind's deterrents are custom machined from a solid block of aluminum. For your convince we do offer tamper resistant bolts on our accessories

As an added benefit, at no extra charge to our customers, StopAGrind offers delayed shipping up to twelve months in advance to help reduce the likelihood of lost or misplaced products on the jobsite.

Choose from our standard machined or sand blasted finish at no extra charge.

INSTALLATION AS SIMPLE AS 123

- Drill two holes 1/4" diameter into the base material
- Place the object to be fastened over the hole in the base material and bolt into place.
